

RP290 Rigging Rope Wrench**Data Sheet**

The Rigging Rope Wrench has been optimised for 13mm (1/2") rope, making it the ultimate lightweight rigging kit, when teamed with hollow-braid slings.

Disengaged
(during lifting)

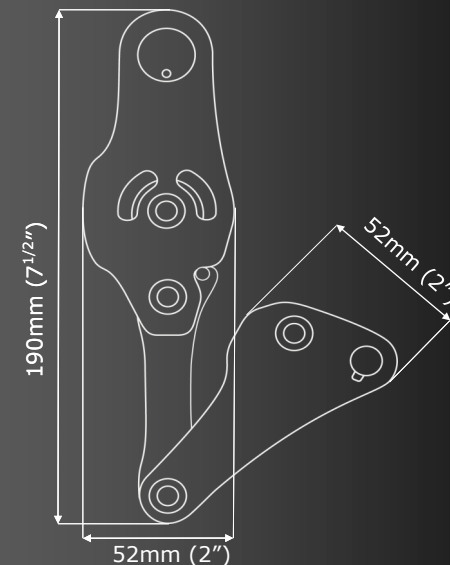

Engaged
(during lowering)

I|S|C

The ISC/Singing Tree Rigging Rope Wrench applies friction to a lowering line whilst anchored at the top of the tree. This means that the device is controllable from the ground and also from the treetop, should the Climber need to take control.

Giving control to the climber is useful when working in smaller crews, or when the grounds-person is struggling to control the lowered section and the end of the line at the same time. With the Rigging Rope Wrench the climber can control the rope, leaving the grounds-person's hands free to control the lowered section.

Unit Weight (Single Unit)	475g (1lb)
Packed Weight (Single Unit)	727g (1.6lb)
Body Material	Aluminium
WLL	70kg (154lb)
MBS	30kN (6744lbf)
